

Clamping Profile

Pressto

Pressto is an easy way to quickly turn your printed panel into a signpost, an advertising display, a partition wall or a decorative element to any interior area.

Constructed to give maximum flexibility while safely securing rigid materials in a number of different applications making it a highly versatile display tool.

Simple and easy to use

Pressto is constructed from two highly designed silver anodised aluminium profiles, one forms the supporting legs while the other is an integral part of the securing mechanism for the display. Panels from 1mm up to 30mm thick can be accommodated easily and securely within the system.

- Open and close the profile easily with the knurled head screw.
- Integrated rubber laces protect your panel and act as anti-slip pads.
- Available in ready to use sets of standard lengths from 235mm up to 500mm complete with end caps.
- Black side caps can be ordered as an accessory.

Pressto is ideal for

- Promotional displays
- Directional signage
- Event advertising
- Temporary wall partitioning
- Simple barriers

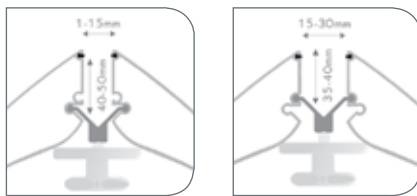

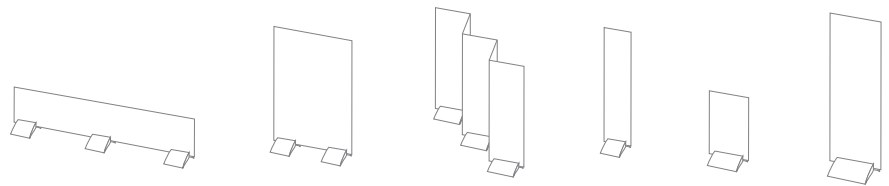

Spandex Sign and Display Systems are the preferred choice of architects, designers and signmakers worldwide
